- THE MOTION SPECIALIST -

PC-MCAT-2

P780 - P783

Motion + PC Software Integration Solution

PC-MCAT-2 is an innovative 'Motion + PC Solution'. A choice of Intel processors (from Celeron through to core i3 - core i7) is used to drive both a high performance motion controller and a compact PC that can run user applications under Windows.

PC-MCAT-2 is especially suitable where a machine needs the software and hardware features of a PC, paired with a powerful 64 axis *Motion Coordinator*.

AT A GLANCE

- ★ Motion + PC solution for Automation Machinery
- ★ Fanless Compact PC with a choice of processors
- ★ Up to 64 EtherCAT axes
- ★ Plug and play EtherCAT configuration
- ★ Built on Trio's Motion-iX advanced motion core
- ★ Programmable in Trio's multi-tasking language or IEC61131-3
- ★ Shared memory API interface to allow PC side applications to interface with Motion-iX
- ★ RTX64 Real Time Extensions to Windows
- ★ Up to 8 Gbyte DDR4 + 256 Gbyte SSD
- ★ Built in Gbit ports for vision cameras

PC-MCAT-2

P780 - P783

Motion + PC Software Integration Solution

Trio's next generation PC-MCAT-2 combines PC technology with the Motion-iX advanced motion core allowing PC applications to run alongside real-time motion control and deterministic EtherCAT communication.

User programs can be written in Trio's established multi-tasking programming language or industry standard IEC61131-3 using the powerful *Motion Perfect* application development software. Alternatively, applications can be written and executed under Windows and use a shared memory API to communicate with Trio's Motion-iX advanced motion core, allowing maximum flexibility in application development.

PC-MCAT-2 supports a wide range of communication ports including Ethernet (up to 1000Mbit), USB (3.0 and 2.0) COM ports (RS232 and RS485) and HDMI for connectivity to PC peripherals. In addition to the communication ports, PC-MCAT-2 has 16 GPIO points, 8 DIN and 8 DOUT.

Supporting PC peripherals and off-the-shelf Windows applications alongside Trio's Motion-iX advanced motion core gives a high-performance flexible solution for applications where specific external devices are required such as vision applications.

		ROBOTICS Programming AVHPcam	GEARING/CAM MOVELINK FLEXLINK	Registration Laser Power Modulation Laser Triggering			

Not all technologies are used with all Trio product.

Combining an advanced motion core with Trio's ease-of-use, Motion-iX offers performance and dependability of packaged solutions, from "The Motion Specialist", where motion is the core and not just a bolt-on capability.

Motion-iX – a unified software engineering framework for machine development, that places the focus on optimising motion and complex kinematics, including robotics such as SCARA, to deliver truly optimal machine control performance.

Motion-iX includes development in IEC61131 and PLCopen, and boasts inverse kinematics capabilities to truly coordinate all machine axes as one, including

robots to maintain tight synchronisation or robots and machine as one. Virtualization allows simulation of the mechanics and motion to significantly reduce development and testing, delivering optimal control every time, by minimising machine cycle times.

WWW.TRIONOTION.COM

Trio Motion Technology specialises in advanced motion control as a core, providing a range of *Motion Coordinators*, drives and motors, expansion interfaces, I/O modules and HMI's built on Motion-iX technologies and designed to enable the control of industrial machines with the minimum of external components.

In support of the Trio concept, we aim to offer the best technical support by telephone, email, our comprehensive website and training courses held throughout the year. Please look at our web site for details.
